

The Metropolitan Water District of Southern California

Infrastructure Improvement Project in Your Community

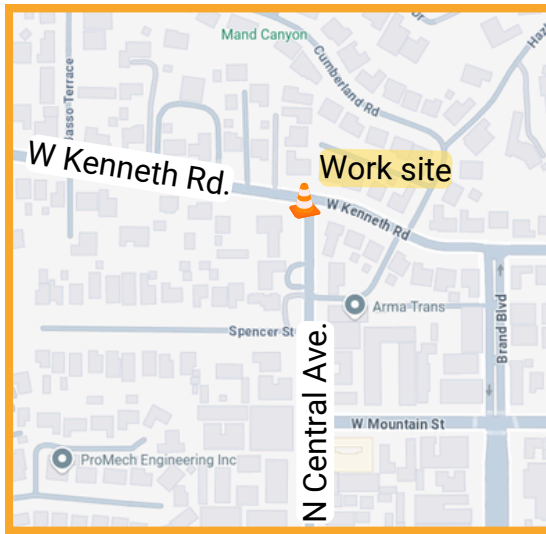

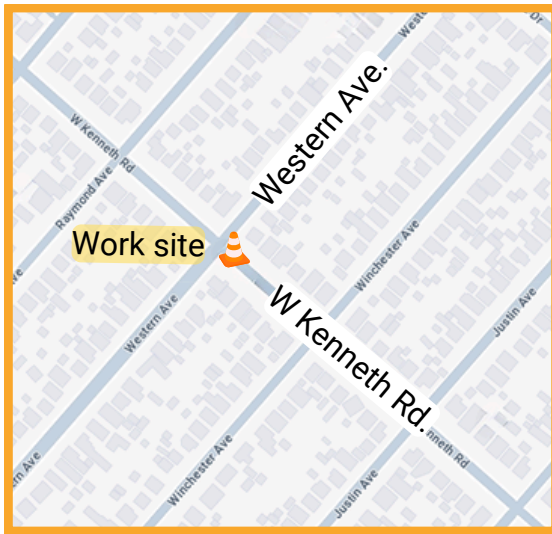

Santa Monica Feeder Cathodic Project

ABOUT THE PROJECT

Metropolitan will be performing maintenance work on the Santa Monica Feeder in your neighborhood. Installed in 1941, the Santa Monica Feeder serves the cities of Santa Monica, Beverly Hills, and Glendale. The 49-inch diameter mortar-coated steel portion of the pipeline within Glendale is experiencing corrosion deterioration. To extend the life of the pipeline and reduce the risk of an emergency repair, a cathodic protection system needs to be installed.

This work is necessary to ensure our water distribution system continues to provide a reliable water supply for our 26 public member agencies that serve 19 million customers.

We ask for your understanding and patience as we work to complete these activities as quickly as possible.

WHAT TO EXPECT

YOUR WATER SUPPLY WILL NOT BE AFFECTED.

- There may be temporary no parking zones, lane reductions, and detours in place.
- You may hear noise due to construction, ventilation, and other equipment.
- You may notice trucks, equipment, and our staff at work.

SCHEDULE

 Work is scheduled for Feb 3 - May 2025
7 a.m. - 7 p.m.

WHO IS METROPOLITAN

The Metropolitan Water District of Southern California is a state-established cooperative of member agencies, cities and public water agencies that serve about 19 million people across six counties. Metropolitan imports water from the Colorado River and Northern California to supplement local supplies, and helps its members to develop increased water conservation, recycling, storage, and other resource-management programs.
